

C.I.P: Critical Infrastructure Protection *Two Hour Replacement Part Guarantee*

When your IT Infrastructure fails, parts can be costly and hard to source, with lengthy lead times. This puts your business, clients and reputation at risk.

To combat this challenge, Huon IT has developed the C.I.P. program for Australian businesses.

Now you can protect your business continuity in five simple steps:

How Can C.I.P help your business?

Whether your hardware is out of standard vendor warranty, or you simply want to ensure faster hardware replacements, Huon IT's Critical Infrastructure Protection service will provide access to over 60,000 spare parts stored locally:

- **Guaranteed 2 hour replacement parts onsite 24 x 7**, where you can then install it yourself or opt for assistance from a skilled engineer
- **Low, flat rate fee** on a month to month basis, no matter how many parts you need
- **No minimum contract period** so if you are planning to replace your server in a few months, this service will help it last until then.
- Carries over **60, 000 spare parts stored locally**
- Optional **24 x 7 or 9 x 5** (Business Hours) Plans
- Available in most **major cities**

Many businesses have already signed up to C.I.P and have seen a great return on investment - minimised downtime, avoided nasty surprises and gained overall confidence in their systems.
